

# Accelerating The Sustainability Transformation of Existing Buildings in Hong Kong

Organiser:

Panel Session Hosts:

Panel Supporting Organisations:

## Introduction

In Hong Kong, there are 42,000 private buildings and with 28,000 of them having an age of 30+ years or above. To accelerate the sustainability transformation of Hong Kong, it is important that there are appropriate management policies, certification schemes and incentives in place to upkeep the condition of aged existing buildings in Hong Kong and to allow the occupants to live healthy and well in these buildings. In this panel session, the panellists will share their practical experience, drivers and knowledge in implementing appropriate measures to accelerate the sustainability transformation of existing buildings. The panellists will also share their experience in applying the Hong Kong's **BEAM Plus Assessment Tool** in scaling up their sustainability transformation of existing buildings and facilitating the disclosure of sustainability performances to their stakeholders.
