

2	SITE ASPECTS	2.1 SITE LOCATION	SA 2 LOCAL TRANSPORT	
EXCLUSIONS	None.			
OBJECTIVE	Discourage the use of private vehicles and taxis by building users, with the aim to reduce air pollution, energy use, and noise from traffic.			
CREDITS ATTAINABLE	3			
PREREQUISITES	None.			
CREDIT REQUIREMENT	a) Car parking provisions			
	1 credit where parking capacity does not exceed the minimum requirement from government and parking is provided for carpools or shuttle service vehicles.			A1
	2 credits where no car parking is provided other than provisions intended for use by disabled persons and/or shuttle service vehicles.			
	b) Public transport			
	1 credit for availability of convenient pedestrian access to mainstream public transport.			B1
ASSESSMENT	a) Car parking provisions			
	The Client shall provide details of any car parking facilities and the means of vehicular access and egress, in terms of drawings and/or photographs, together with a report confirming access and restrictions on use, as they affect the occupants. To obtain credit, any car park shall comply with the following conditions:			A2 A3
	• by providing access that ensures simultaneous free flow of vehicles in and out of the car park; and			A4
	• provisions to avoid ground contamination from oil run-off.			A5
	b) Public transport			
	To obtain the credit, the mass transit station or other public transport facilities must be within 500m walking distance of the occupied building, and the scheduled operating frequency between 07.00 to 19.00 hours shall be 10 minutes or less.			B2
	The Client shall provide evidence in the form of a survey map of the occupied building and the public transport facilities in the near vicinity.			B3
	The map shall identify the location of the building at or near the centre of a scale drawing produced on an A3 size sheet with each of the listed services identified. The unencumbered walking route from the building main entrance to the main entrance to each public transport stop/station shall be clearly marked by lines on the drawing and the walking distance shown alongside. An legend shall be included on the drawing identifying the mass transit system, the walking distance, and the frequency of services during 07.00 to 19.00 hours.			B4
	For sites not directly served by mainstream public transport, the provision of a shuttle service vehicle which links to a main stream mass transport interchange operating at the stated frequency may be deemed to satisfy the criteria. The onus is on the Client to demonstrate that the service is of adequate capacity, the frequency will meet the needs of all building users, and the shuttle bus is company owned, or there is a minimum 1 year rolling contract in place with the service provider.			B5
				B6

The principle is to demonstrate easy access for the public; applicants are required to measure from the main access points of the development.

Future services/facilities provisions not operable at the time of building completion will be considered if they will be in operation no later than one year after obtained the Occupation Permit (OP) for the proposed development.

B7

BACKGROUND

The increasing number of private vehicles in Hong Kong not only increases pressure on the highway and urban traffic system, but also worsens local air pollution. The most urgent problem to be resolved comes from fossil fuel burning vehicles, often aggravated by the street canyon effect of high-rise buildings. Exhaust fumes from cars contain volatile organic compounds: some of these are known carcinogens while others contribute to photochemical smog by assisting in the rapid formation of ozone in the atmosphere. The exhaust fumes also contain CO, CO₂, NO_x and SO₂ which contribute a variety of environmental problems. Apart from the health effects of traffic fumes, motor vehicles also generate noise, another environmental nuisance.

Part of the solution to the air pollution problem is to reduce the use of private vehicles and taxis. Building users should be encouraged to use public transport to and from the building. Provision of pedestrian links which allow easy access to major public transport systems and local amenities can discourage use of private transport, thereby reducing air and noise pollution.

The adequacy of a shuttle bus service may be demonstrated by data showing capacity, frequency, service hours, and the percentage of building users that can be transported during peak periods of commuting.

Circular Letter No.: 2018.150

Issue Date: 26 September 2018

Application: BEAM Plus NB Version 1.1 & 1.2

Effective Date: 26 September 2018

SA 2a Car Parking Provisions

This Circular Letter announces the following amendments on car parking provisions for use by persons with disabilities: -

1. The credit requirement is updated as follows:

a. 1 credit can be achieved if the car parking facilities provided in the development satisfies the following conditions:

i) the number of private car parking spaces for use by persons with disabilities exceeds the minimum requirement from government, but the TOTAL number of car parking spaces does not exceed the minimum requirement¹.

A7

b. 2 credits can be achieved if the car parking facilities provided in the development satisfies the following conditions:

i) no car parking is provided other than car parking provided for use by persons with disabilities and/or shuttle service vehicles; and

A8

ii) the number of private car parking spaces for use by persons with disabilities shall not exceed the minimum requirement from Government.

2. Approved PA projects: For projects that have already completed PA and with specific basis of minimum car parking provision accepted, the Applicant may continue to adopt the same basis in subsequent assessments (FA or Re-assessment of PA stage). For the avoidance of doubt, the Applicant shall provide relevant PA evidence (e.g. car parking calculation submitted in PA, minimum car parking requirement adopted in PA). in subsequent assessments to demonstrate that the same basis in PA is used in subsequent assessments.

Mr KM So
Chairperson of Standards Sub-committee

¹ Minimum requirement from Government is defined as (a) parking requirement as stipulated in the Conditions of Sale from the Land Sales Document or Condition of Lease from the Engineering Condition, (b) minimum car parking spaces calculated with reference to Table 11 (Parking Standards) in Chapter 8 (Internal Transport Facilities) of the Hong Kong Planning Standards and Guidelines, or (c) minimum number of carparking spaces as approved by Transport Department when conditions (a) and (b) does not apply to the development.

Application: BEAM Plus NB Version 1.1
BEAM Plus NB Version 1.2

Effective Date: 11 January 2016

SA 2a Car Parking Provisions

This Circular Letter announces that parking provision for carpools is no longer required. In addition, parking provision for shuttle service vehicles can be exempted for:

1. Development that have convenient pedestrian access within 500m walking distance from the building's main entrance to mainstream public transport as required under the credit requirement of SA 2b.

A10

Note: Parking for shuttle service vehicle will not be taken into account of the minimum car park requirement.

A handwritten signature in blue ink, appearing to read "W. Chan", is positioned above the printed name of the signatory.
